Taking the labor out of unloading & installing Geosynthetics for 38 years !

Roll Puller™ - Patent's Pending
The New Models RP3XL & RP4XL Introduced in 2013

NEW LONGER DESIGN • NEW TEETH • NEW SHAFT • NEW FORGED RING

- Now 16 inches long - 4 inches longer than the previous 12 inch models 1980 - 2013.
- Grabs deeper in the cardboard core to help prevent the cores from tearing.
- A Puller can pull a maximum load of 1000 pounds a roll, rows or banded groups.
- New design Laser Cut LONGERTEETH with Patent Pending "BITE NOTCH".
- New Heavier Duty Forged Ring, threaded onto the shaft & double welded.

RP3XL (2.75"-3.25" ID Cardboard Cores) \$469 each
RP4XL (3.75"-4.50" ID Cardboard Cores) \$439 each

Price effective 4/01/2017

Plus \$15 handling per shipment and Freight charges prepaid or billed to your freight account.

Credit Cards on small orders No discount. - Credit Terms of 2% 5 Net 30 to established accounts.

Insert Roll Pullers in cores. Pull horizontally with an upward lift relieving pressure on the rolls beneath.

This permits rolls to easily slide on the rolls beneath.

Never pull on a downward angle with pressure into the rolls beneath this prohibits the rolls from sliding.

RP 3 XL

RP 4 XL

PLEASE!!
THINK SAFETY
 ROLL PULLERS DO NOT BREAK WITH PROPER USE (SEE PAGE 2)
CHAINS, CABLES, ROPES & SLINGS DO BREAK
 PERSONNEL WILL ENJOY WATCHING HOW FAST & SAFELY ROLL PULLERS UNLOAD TRUCKS & CONTAINERS & NOT USE THEIR COMMON SENSE!
ALL PERSONELL SHOULD STAND CLEAR & NOT NEAR THE SIDE OF THE ROPES, SLINGS, CABLES OR CHAINS IN CASE THEY BREAK.
 PLEASE SEE PAGE 2 FOR USAGE & SAFETY INSTRUCTIONS.
 MAXIMUM LOAD IS 1000 POUNDS.

Since 1980 millions of Geosynthetic rolls on cardboard cores have been unloaded safely, easily and less costly from enclosed vans and containers. **Protects laborers** from back and other injuries and protects the employer from workers compensation & disability claims.

Eliminates most of the manual labor needed to unload rolls or carry rolls from the back to the front of the van or container. **Roll Pullers pay for themselves in just a few shipments:**

Multiple Roll Pullers can unload trucks and containers as much as 10 times faster depending on roll diameter, rolls in a row and weight. Heavier weight and banded synthetics will reduce the number of rolls that can be unloaded per pull. As many as three rows can be pulled on one pull varies depending on the manufacturer's process for winding the synthetic onto the cardboard core. If the core begins to pull out reduce rows.

90 DAY WARRANTY AGAINST DEFECTS FROM DATE OF PURCHASE WITH PROPER USE. PLEASE SEE PAGE 2 FOR INSTRUCTIONS.

Mounque "Monk" Barazone also Patented & has Manufactured for 35 years "The Worlds Best" Telescoping Paving Fabric Installation Machines The Grizzly 600T & Grizzly Cub 300T

We stock parts for complete systems using 4" Steel O-Rings

5/16" Class 80 OSHA Approved Lifting Chain & Clevis Slip & Grab Hooks

1"X4" Steel O-Ring - \$39.50 each • 5/16" Clevis Hook Slip - \$18.50 - Grab—\$14.50 each

5/16" Class 80 Chain, OSHA approved for lifting: 4' -\$32.00 each • 6' -\$48.00 each

Labor: Cut chain & assemble one of each hook on chain ends: \$15.00 per chain

2 Puller set uses 2 - 6' chains
 3 Roll Puller set uses:
 1 - 4' center & 2 - 6' outer chains
 4 Puller set uses: 2 of each 4' & 6'

Used by Contractors, Distributors, Manufacturers & Truckers since 1980.

Roll Pullers™ can pull up to a maximum 1000 pounds each if used correctly. Rolls can be pulled from a truck or container onto the ground, to an existing pile of synthetics, onto a forklift, a loading dock or a truck.

© Copyright 1980 - 2017 - Present: Mounque Barazone & Geotextile Apparatus Company: All rights reserved: Page 2

2 Pullers pulling up to 6 - 4 OZ. stacked single rolls or 2 banded groups & with stacking 3 groups may be possible. Up to a maximum load of 1000 pounds per Roll Puller.

3 Pullers pulling up to 12- 4 OZ stacked single rolls or 4- 5 banded groups with stacking may be possible.

Directions For Use:

- 1 - Attach a pulling rope, strap, cable or chain to the **Roll Puller™** ring..
- 2 - Insert the **Roll Puller RP3XL (2.75" - 3.25")** or **RP4XL (3.75"-4.5")** into the roll cardboard core leaving the red tape line exposed (about 2").
- 3 - Holding the **Roll Puller** pull the ring back locking the teeth into the cardboard core. Tug on the rope or chain to make sure the **Roll Puller** teeth are set and biting into the cardboard core and will not come out.
- 3 - **For Multiple Roll Pullers**, attach short class 80 or 100 OSHA approved chain for lifting with hooks to the **Roll Pullers** and then to a heavy Steel O- Ring. Attach 65' minimum 5000 LB - 1" rope (strap, cable or chain) to the O- Ring.
- 4 - Pull on the rope with available equipment (forklift, end loader, pickup truck, etc.).
- 5 - Pull rolls horizontally or with a slight upward lift. This reduces pressure and drag and permits the rolls to slide easily on the rolls beneath those being pulled.
- 6 - **DO NOT pull downward on an angle.** This pulls the rolls downward into the rolls beneath and increases the pressure and drag on the load being pulled.
- 7 - When the synthetic is unloaded and the rope is slack, remove the **Roll Puller** by pushing the ring into the Roll Puller while holding onto the red taped part to release the teeth from the core. Slide the **Roll Puller** out of the core.
- 8 - **When using Multiple Roll Pullers** rolls can be pulled one at a time, in banded multiples or in stacked rows depending on weight and the corer not pulling out.
- 9 - If the core tears or begins to pull out reduce the weight or move up a row. 1, 2 or 3 rows (in height) of synthetics can be unloaded with one pull depending on the product's roll weight and manufacturers winding process on the core.
- 10 - **THINK SAFETY** at all times. Personnel should wear hard hats, steel toed shoes, eye protection, gloves and have retractable blade slit knives for cutting bands. All personnel should stand clear, far enough away from the rope and to the side of the truck or container. NEVER STAND along the level of the rope being pulled in case the rope breaks. **THINK SAFETY.**

4 or 5 Roll Pullers pulling 21 - 4 OZ. single rolls, 3 rows of 7 or 4 - 7 banded groups with stacking. The number of rows and stacking will vary depending upon the manufacturers winding process on the core. Maximum load per Roll Puller is 1000 pounds. used correctly.

THINK SAFETY

**SAFETY ZONE
STAND HERE**

PERSONEL SHOULD NEVER STAND ALONG THE ROPE OR WHERE ROLLS FALL

Red
Tape

Clevis
Grab
Hook

**RAISE THE LIFT TO PULL HORIZONTALLY
OR WITH A SLIGHT UPWARD LIFT**

**PULL HORIZONTALLY OR WITH A
SLIGHT UPWARD LIFT.**

This reduces pressure on the rolls beneath those being pulled and allows the roll to slide easily out.

**NEVER PULL DOWNWARD
ON AN ANGLE or TUG.**

This increases the PSF load and can exceed 1000 pounds. It forces the rolls into the rolls beneath reducing slide and requiring tugging and jerking. This will damage the roll puller. **Downward pulling flexes the ring and shaft juncture and weld. It will eventually create stress fractures which will shear the joint and shaft. It voids the warranty.**

Tugging can tear the cardboard core. Horizontal or an upward lift pulling speeds up the unloading process and decreases unloading time and costs.

Insert the Roll Puller into the core up to the Red Tape end leaving the tape, ring, hook and chain exposed out of the core.

Unloading rolls is fast, easy and safe including pulling rolls wedged on the top or from deep in the rear of the enclosed vans
